Skills

- **Python, JavaScript, PowerShell, Bash, Batch, PostgreSQL, Typescript, Java, C++, C#, ARM, ROS**
- **RESTful API, Enterprise MongoDB (NoSQL), FastAPI, Ansible, Docker, Kubernetes, Jira, Confluence, Gitlab, CI/CD pipelines**
- Experienced in **agile** development, Kanban, and **scrum** methodology on daily basis
- **Object oriented** automation on **Windows and Linux** platforms

Professional Experience

Senior Software Engineer – ZT Systems, Secaucus, NJ

August 2022 – May 2025

- Served as **Lead Engineer and Architect** for the **New Tools and Frameworks Team**, architecting foundational infrastructure and spearheading development across the department to drive software innovation.
- Overhauled legacy QA automation processes and **rebuilt core software frameworks**, significantly reducing daily maintenance overhead and manual intervention while improving code clarity and system simplicity.
- Designed and deployed the team's new **database via MongoDB**, establishing **decentralized data ownership** and usability while streamlining user access to complex datasets and securing future data collection growth.
- **Architected data models and modernized core data structures** to **optimize database performance and scalability**, reducing production overhead and improving backend efficiency across department-wide applications.
- Co-led the restructuring of automated software systems by implementing a modular, **hardware and os-agnostic plug-in architecture**, which minimized maintenance overhead through root-cause detection, deployment validation, and adaptive debugging features **reducing Jira ticket volume by 80%**.
- Designed and deployed a **FastAPI microservice via Docker containers** responsible for **secure global network credential** distribution, maximizing site portability and system scalability.
- **Managed** the deployment of **WinPE and Linux images**, re-engineering startup processes, streamlining cross-site deployment workflows, and **eliminating security vulnerabilities** by removing the need for hardcoded environment credentials.
- Led the design and development of **scalable FastAPI services** tailored for **high-throughput data processing workflows**, ensuring strict modularity, significant system scalability, and user accessibility.
- Led cross-functional initiatives to continuously optimize applications for validation, systems, and failure analysis teams, significantly **reducing diagnostic cycle times by over 75%**; **enhancing data collection**, application scalability, and root-cause clarity.
- Facilitated daily stakeholder syncs and biweekly product demonstrations; **authoring comprehensive technical documentation** ensuring alignment across engineering and non-technical departments.

Software Engineer – ZT Systems, Secaucus, NJ

August 2020 – August 2022

- Modernized legacy pipelines by contributing to **REST API development** and refactoring obsolete **SQL queries** and procedural code into clean, **reusable service layers**.
- **Led agile collaboration** with system and validation teams to **automate QA testing via the NPI process**, improving workflow reproducibility and **defect traceability**.
- Regularly produced concise issue reports and test coverage summaries, fostering better product planning and cross-functional clarity.

Education

The State University of New York at Buffalo

May 2020

Bachelor of Science in Computer Engineering
